# WWW Applications

## Lab #1

### Jakub Długosz, Ph.D.

### The purpose of this list is to build website using proper HTML5 semantic markup.

## Task #1

Look at HTML 5 current specification (https://html.spec.whatwg.org/) and at additional materials about HTML5 from https://developer.mozilla.org/en-US/docs/Web/Guide/HTML/HTML5 and https://www.w3schools.com/html/ .

## Task #2

Create HTML5 website (you can use any text editor ex. Notepad, Wordpad, **Notepad ++** - https://notepad-plus-plus.org/downloads/, **Visual Studio Code** - https://code.visualstudio.com/download or **Web Storm** - https://www.jetbrains.com/webstorm/) describing you and presenting your achievements and interests. In some sections present also pictures and videos. Make your markup semantically meaningful. Plan and apply proper navigation between all pages in your project.

## Task #3

Find on w3.org websites HTML5 markup validator. **Validate** with it website you created in Task #2 .
